SHARON KUAN

Redmond, WA • 425-761-7689 • sharon_kuan@hotmail.com • LinkedIn: linkedin.com/in/sharon-kuan-2269bb44

Executive Summary

Senior QA Analyst / SDET with 16+ years of experience validating complex web applications, APIs, enterprise workflows, and data-driven systems. Expertise includes requirements analysis, code and design review, SQL data validation, API testing, risk-based testing, defect management, and release readiness across Agile and Waterfall environments. Strong background collaborating with developers, business analysts, and stakeholders to ensure functionality, security, performance, maintainability, and production readiness. Experienced with Playwright automation, Azure DevOps, AI-assisted development workflows, and applying quality controls throughout the software development lifecycle.

Core Competencies

- Code Review & Technical Validation
- Requirements Analysis & Acceptance Criteria Review
- SQL Data Validation & Data Integrity Testing
- REST API & Integration Testing (Swagger/Postman)
- Risk-Based Testing & Defect Management
- Release Readiness & SDLC Quality Gates
- Playwright Automation & Test Framework Design
- Cross-Functional Collaboration & Technical Reviews
- White-Box, Black-Box, Functional & Integration Testing
- AI-Assisted Quality Engineering

Professional Experience

Senior QA Analyst / SDET (Senior QA & UAT Analyst) 2010 – 2026

MCG Health (Hearst Health) Seattle, WA (Remote)

Automation & Engineering Enablement

- Built a modern Playwright automation POC using AI-assisted workflows, directing AI to generate initial script structures while refining selectors, page-object patterns, reusable variables, and parallel workflow logic.
- Enabled engineering teams to improve quality through automation, workflow validation, code review collaboration, and earlier defect detection across the SDLC.
- Advocated for shift-left testing by clarifying acceptance criteria early, identifying gaps, and reducing ambiguity before development began.

Test Automation & Quality Metrics

- Automated functional flows aligned with real user behavior, validating DOM stability and designing selectors resilient to UI changes.
- Improved CI reliability by diagnosing flaky tests caused by async transitions, dynamic dialogs, and slow DOM loads.
- Strengthened SDLC quality gates through risk-based testing, regression coverage, release validation, and improved failure diagnostics.

API & Data Validation

- Validated REST APIs, integrations, microservice workflows, and error-handling behavior using Swagger and Postman.
- Validated SQL queries, business rules, data transformations, stored procedures, and backend processes to ensure data integrity and release readiness.

Cross-Team Collaboration

- Partnered with developers, business analysts, and stakeholders to clarify requirements, validate acceptance criteria, identify risks, and improve overall software quality.
- Participated in code reviews, test reviews, and quality assessments to validate implementation intent, workflow accuracy, and release readiness.

QA Analyst – Data Validation 2008 – 2010

Freelance QA Various Roles

- Analyzed requirements, identified gaps and ambiguities, and refined acceptance criteria to improve quality, traceability, and testing effectiveness.
- Performed deep exploratory testing and validated data workflows.

Logistics Systems Liaison 1996 – 1998

German-Based Logistics Company West Coast / Early Career

- Served as liaison between users and technical teams; contributed to system development.

Technical Skills

Testing: Manual, Exploratory, Functional, Integration, Regression, UAT, API, Risk-Based Testing

Automation: Playwright, Cypress, Selenium, Coded UI (legacy), AI-assisted programming

Languages: JavaScript, Python (learning)

Tools: Jira, Azure DevOps, GitHub, Swagger, Postman

Methodologies: Agile, Scrum, Waterfall
